StudyVance AI Academy

Level 1 AI Explorers

Complete teacher guide

Six practical lessons for Grade 4 to 6 beginners. Each lesson has a 60-minute core and an optional 15-minute extension. Includes teaching scripts, demonstrations, offline alternatives, differentiation, answers and assessment guidance.

Course purpose

Help learners understand AI, give clear instructions, check answers and create an illustrated story while retaining ownership of their thinking. Children work through teacher-led demonstrations and paper activities; individual learner AI accounts are not required.

What is included

- A separate printable learner workbook with two activity pages per lesson.
- Six complete lesson plans with exact prompts and prepared demonstration texts.
- A story project developed in Lessons 4 and 6.
- Answer guidance, a skills rubric and a parent information sheet.

Prepared for Nico du Plessis and the StudyVance teaching team. English edition. Teachers may explain concepts orally in Afrikaans while keeping the same learning objectives.

Course overview and teaching arrangements

Lesson	Focus	Evidence of learning
1	Meet AI	Explains AI simply and identifies a privacy rule.
2	Ask better questions	Writes a prompt with a task, details and a format.
3	Become an AI detective	Checks claims against supplied evidence and corrects errors.
4	Create an illustrated story	Plans a story and improves a prepared AI draft.
5	Learn with AI	Uses a hint and solves a new problem independently.
6	Finish and present	Presents a story and explains personal and AI contributions.

Prepare before the first session

- Print one workbook per learner. Keep this guide for the teacher. Provide pencils, erasers, colouring materials, plain paper and a board.
- Use one teacher-controlled device and a display if available. Print the prepared demonstration texts for an entirely offline course.
- Arrange learners in pairs or small groups. Suggested pilot size: 6 to 10 learners, adjusted to available support.
- Read all prepared texts and check any live output before showing it. Use fictional characters and no learner personal information.
- Brief parents on adult-led AI use and agree on any photography or work-sharing permissions separately.

Age requirements and supervision

For ChatGPT activities with children under 13, the adult must conduct the interaction. Learners aged 13 to 17 require parental permission for their own use. This course keeps demonstrations adult-operated regardless of learner age. Check the current rules of any selected tool before teaching. Do not ask children to open accounts or share a teacher’s login.

AI activities are optional live demonstrations: the supplied texts make every lesson teachable without internet, subscriptions or image generation. Prepared examples in this guide were written for instruction; they are not claimed to be actual AI outputs.

Progress and accessibility

Accept oral answers, drawings and a scribe where needed. Use short reading chunks and pairs without having one learner do all the thinking. Learners with stronger skills explain why an improvement works. Assess AI understanding rather than spelling, reading speed or artistic ability.

Lesson 1 Meet AI

Learning objectives

- Describe AI as computer software that learns patterns from examples.
- Explain that AI can produce useful answers and also make mistakes.
- Identify information that should stay private.

Materials and preparation: Workbook Lesson 1, four example cards below, board and pencils. Optional: teacher device and display.

Minutes	Stage	Teacher actions
0–5	Welcome and baseline	Ask: “Where have you heard the words AI?” Learners complete the two starting questions without help. Accept “I do not know.”
5–15	Explain AI	Read the short explanation below. Ask learners to name one possible use and one limit.
15–25	Sort examples	Read the four example cards. Pairs decide whether each shows AI or ordinary programmed behaviour. Discuss the clues.
25–40	Privacy choices	Read the four prompt examples on workbook page 1B. Learners remove private details and explain their choices.
40–52	Teacher demonstration	Compare a confident answer with evidence. Use the prepared text or the live prompt below. Highlight that confidence does not prove accuracy.
52–60	Exit ticket	Learners complete “AI can…”, “AI may…” and one privacy rule. Review answers before they leave.

Key teaching words

“AI means artificial intelligence. Many AI systems learn patterns from lots of examples. Some can make text or pictures when we give them instructions. AI is not a person. It does not know everything about us, and a convincing answer can still be wrong. We are responsible for checking what we use.”

Lesson 1 Demonstrations and teaching notes

Optional live demonstration

Teacher prompt: “Explain artificial intelligence to a Grade 4 learner in three short sentences. Mention that it can make mistakes. Use no personal information.” Read the answer privately first. Ask: “What would you still want to check?”

Prepared offline version

Prepared explanation: “AI is software that learns patterns from examples. It can help make text or pictures from instructions. Sometimes its answers are wrong, so people need to check them.” Then show this deliberately wrong sample: “AI is always right because computers never make mistakes.” Learners challenge it.

Example cards and class rules

Card A: A basic calculator follows fixed steps to work out 6 × 4. This is ordinary programmed calculation; it does not establish AI use.

Card B: A system trained on many labelled animal pictures predicts whether a new picture shows a cat. This is an AI example.

Card C: A kitchen timer rings after ten minutes. This is ordinary programmed behaviour.

Card D: A text system learns patterns from many examples and creates a new story from instructions. This is an AI example.

Check understanding

Expected: B and D are AI examples; A and C alone are not. Emphasise that a device can contain several features, some with AI and some without. Privacy examples and accepted responses appear in the answer section.

Support and challenge

Read every card aloud. Let learners point to AI or ordinary software instead of writing. Advanced learners explain why a calculator is not proof of AI.

Optional 15 minute extension

15 minutes: play “human instruction machine”. Give the teacher vague instructions to draw a house, then improve the instructions. Connect this to Lesson 2.

Optional family practice

Optional family task: explain one useful AI activity and one rule. No account, app or internet use is required.

Lesson 2 Ask better questions

Learning objectives

- Identify the task, useful details and requested format in a prompt.
- Improve a vague instruction without adding private information.
- Compare two answers against the original request.

Materials and preparation: Workbook Lesson 2, board, prepared prompt and reply examples below. Bring a blank sheet for a drawing activity.

Minutes	Stage	Teacher actions
0–5	Recall	Ask for one AI limit and one privacy rule from Lesson 1.
5–15	Drawing challenge	Say “Draw an animal.” Then say “Draw a small robot rabbit with two long ears and three buttons.” Compare the variety of results without judging art.
15–25	Teach the prompt structure	Model Task + Details + Format. Explain that a prompt is an instruction or question given to an AI tool.
25–40	Build prompts	Learners complete workbook 2A. Pairs read their prompts and check that all three parts are present.
40–52	Compare outputs	Use the prepared examples on the next teacher page or a screened live demonstration. Decide which follows the request more closely.
52–60	Exit ticket	Each learner writes or dictates a new complete prompt. Ask them to justify one detail they included.

Key teaching words

“A better instruction tells the tool what to do, gives details that matter and says how the result should look. More words are not automatically better. Useful details are better. We still check the reply, because even a clear prompt does not guarantee a correct answer.”

Lesson 2 Demonstrations and teaching notes

Optional live demonstration

First prompt: “Write about animals.” Second prompt: “Write three short sentences for a Grade 4 reader about a fictional robot rabbit helping an animal shelter. Use simple words and a friendly tone. Do not include real names.” Screen both replies; compare task, details and format.

Prepared offline version

Prepared vague reply: “Animals are found in many places. They can be large or small. People like animals.” Prepared clear reply: “A robot rabbit carried blankets to the animal shelter. It helped the keeper fill the water bowls. At sunset, every animal had a cosy place to rest.” Ask learners which reply fits the second prompt and which details are still worth reviewing.

Prompt building and feedback

Model: Task: write a story opening. Details: fictional robot rabbit, animal shelter, Grade 4 reader, friendly tone. Format: three short sentences.

Practice 1: Improve “Tell me about space.” Possible answer: “Explain the Moon to a Grade 4 learner in four short bullet points. Use simple words and remind me to check factual claims.”

Practice 2: Improve “Make a story.” Possible answer: “Write a five-sentence adventure about a fictional robot and a lost kite for a Grade 5 reader. Include a problem and a kind solution.”

Peer feedback: Ask: What is the task? Which details matter? Is the format clear? Is any private information included? What could we improve?

Check understanding

A complete prompt includes a clear task, at least one relevant detail and a requested format. Do not award marks for prompt length alone. Multiple different prompts can meet the objective.

Support and challenge

Provide the sentence frame “Please ___ about ___ for ___ in ___.” Offer a word bank: explain, list, story, three sentences, simple words. Advanced learners revise a prompt after finding a missing requirement in the reply.

Optional 15 minute extension

15 minutes: change only the audience, then only the format. Predict how the result should change before the teacher demonstrates.

Optional family practice

Optional: write paper instructions for making a sandwich. A family member identifies one missing detail; no AI access is needed.

Lesson 3 Become an AI detective

Learning objectives

- Distinguish a claim from evidence.
- Use a supplied fact sheet to check an answer.
- Correct inaccurate claims and say when evidence is insufficient.

Materials and preparation: Workbook Lesson 3 includes a fact sheet and deliberately flawed text. Teacher keeps the answer guidance out of learner view.

Minutes	Stage	Teacher actions
0–5	Recall	Learners name the three parts of a clear prompt.
5–15	Teach checking	Model Read → Compare → Decide → Correct. Explain supported, contradicted and not enough information.
15–25	Model one claim	Check “The Moon makes its own light” against fact sheet item A. Read the evidence aloud and correct the claim.
25–43	Detective pairs	Pairs check claims 2 to 5 on workbook 3A. Require a fact-sheet letter or “not enough information” for each.
43–53	Correct the reply	Learners rewrite the short Moon paragraph on workbook 3B. Compare against the evidence.
53–60	Exit ticket	Give a new unsupported claim about Moon rocks. Learners explain why a fact sheet that says nothing about it cannot confirm it.

Key teaching words

“A claim is something someone says is true. Evidence helps us decide whether it is true. We check each claim separately. Sometimes the evidence supports it, sometimes it contradicts it, and sometimes we need more information. Asking the same AI again is not independent proof.”

Lesson 3 Demonstrations and teaching notes

Optional live demonstration

Teacher prompt, optional: “Using only this fact sheet, write three simple sentences about the Moon. Do not add facts outside the sheet. Fact sheet: The Moon reflects sunlight; it orbits Earth; Earth has one natural moon; the Moon has no breathable atmosphere for people.” Compare every sentence with the supplied facts.

Prepared offline version

Deliberately flawed practice paragraph: “The Moon makes its own light. It travels around Earth. Earth has two natural moons. People can breathe normally on the Moon without equipment. A purple dragon lives there.” Use the same text for all learners so the exercise remains consistent.

Evidence for the detective activity

Fact A: The Moon does not make its own visible light. The bright Moon we see reflects sunlight.

Fact B: The Moon orbits Earth.

Fact C: Earth has one natural moon.

Fact D: The Moon does not have a breathable atmosphere for people. People would need life-support equipment.

Claim 5 caution: The supplied sheet gives no evidence about a purple dragon. Mark “not enough information from this sheet”. Discuss that a claim is not credible simply because a sheet does not disprove it; broader reliable evidence would be needed.

Check understanding

Claim 1 contradicted by A; 2 supported by B; 3 contradicted by C; 4 contradicted by D; 5 not enough information in the sheet. Corrected paragraph should retain only supported statements. The purple dragon can be used in a clearly labelled fictional story, not a factual explanation.

Support and challenge

Use green for supported, red for contradicted and a question mark for insufficient evidence. Read the sheet aloud. Advanced learners explain why fact checking needs a suitable independent source.

Optional 15 minute extension

15 minutes: use a current school science textbook to check one Moon fact. Teacher models finding the relevant page and recording the title or page number.

Optional family practice

Optional: bring a non-personal factual claim from a textbook, with the page that supports it. Do not require web searching.

Lesson 4 Create an illustrated story

Learning objectives

- Plan a fictional character, setting, problem and solution.
- Review a prepared draft against a story brief.
- Make purposeful changes and identify the learner's own contribution.

Materials and preparation: Workbook Lesson 4, coloured pencils and plain paper. Keep story plans for Lesson 6. Use drawn illustrations; generated images are optional teacher demonstrations only.

Minutes	Stage	Teacher actions
0–5	Recall	Ask when a dragon belongs in a story and when it does not belong in a science explanation.
5–15	Explain the project	Introduce a 6 to 8 sentence illustrated story for a Grade 4 reader. Read the four requirements on the next page.
15–28	Plan	Learners choose a fictional character, setting, problem and solution on workbook 4A.
28–38	Review a draft	Read the prepared robot-rabbit draft. Pairs spot where it breaks the shared brief.
38–52	Improve and draw	Each learner rewrites at least two sentences and sketches a scene. Teacher collects suggested improvements.
52–60	Save evidence	Learners record one change and why it helps. Keep plan, draft and illustration together for Lesson 6.

Key teaching words

"AI can suggest a starting point, but we decide whether it fits our plan. A polished-looking draft can still ignore our instructions. Your job is to improve it and explain your choices. Draw your own illustration so you can show your version of the story."

Lesson 4 Demonstrations and teaching notes

Optional live demonstration

Teacher prompt: “Suggest a six-sentence fictional story for a Grade 4 reader. Character: Pip the robot rabbit. Setting: an animal shelter. Problem: a kitten’s blanket is missing. Solution: Pip asks the keeper for help and finds a safe spare blanket. Use a kind tone, no magic and no real names.” Preview the output and keep a printed copy if used.

Prepared offline version

Prepared draft: “Pip the robot rabbit worked at an animal shelter. One morning, a kitten’s blanket was missing. Pip shouted at the kitten for losing it. Then a magic wand appeared and made a hundred blankets. The kitten flew into space. Everyone clapped.” This deliberately ignores the kind tone, realistic solution and setting continuity.

Final project requirements and revision model

Story brief: Create a fictional story of 6 to 8 sentences for a Grade 4 reader. Include a character, setting, problem and kind solution. No real personal details.

Illustration: Add at least one learner-created drawing that matches a scene. Drawing skill is not assessed.

Revision evidence: Keep a first draft or the supplied draft. Change at least two sentences and explain at least one change.

Acknowledgement: Add a truthful note: “I used a prepared practice draft and changed …” or “My teacher used AI to suggest … and I changed …”. Do not claim live AI use if none occurred.

Model revision: “Pip asked the keeper where the spare blankets were kept. Together they found a clean blanket in the cupboard. Pip tucked it into the kitten’s basket. The kitten curled up warmly, and Pip went back to help the other animals.”

Check understanding

Look for a coherent solution, respectful tone and changes that improve the brief. Learners may use the shared character or their own fictional character. Only assess requirements actually taught.

Support and challenge

Offer a four-part oral story and a scribe before expanding to sentences. Advanced learners revise two drafts and explain which better fits the audience.

Optional 15 minute extension

15 minutes: compare two drawn scenes. Does each match the text? Add a caption that helps the reader.

Optional family practice

Optional: finish colouring a scene or tell the story to a family member. Do not use a learner AI account.

Lesson 5 Learn with AI

Learning objectives

- Ask for a hint or explanation that supports learning.
- Check a proposed maths method by working it out.
- Solve a similar problem independently and explain the method.

Materials and preparation: Workbook Lesson 5, counters or small paper squares, pencils. Use the included reading passage and maths problems so no external resource is required.

Minutes	Stage	Teacher actions
0–5	Recall	Learners share one change made to their story.
5–15	Help or copying	Compare “Give me the answer” with “Give me one hint, then let me try.” Discuss how we can show understanding.
15–28	Guided maths	Model 24 ÷ 3 using the hint below. Learners draw or place equal groups and explain the result.
28–40	Find a method error	Check the wrong worked answer on workbook 5A. Correct it with counters or multiplication.
40–52	Reading practice	Read the passage on workbook 5B. Answer the practice questions, citing the relevant sentence.
52–60	Independent check	No AI or partner help: solve 18 ÷ 3 and explain why the reading statement about the gate is false.

Key teaching words

“Useful help gives you a way to think. It does not do all your thinking for you. After a hint, try the task yourself. Then check whether you can do a similar task without help. An AI explanation needs checking just like any other answer.”

Lesson 5 Demonstrations and teaching notes

Optional live demonstration

Teacher prompt: “Help a Grade 4 learner understand 24 divided by 3. Give one hint using equal groups, then stop and wait. Do not give the answer yet.” Preview before displaying. If the tool gives the answer, point out that it did not follow the request and use the prepared hint instead.

Prepared offline version

Prepared hint: “Draw three empty circles. Share 24 dots equally between the circles. How many dots are in each circle?” Expected result: 8 per group, checked by 3 × 8 = 24. Wrong sample: “24 ÷ 3 = 7 because 3 × 7 = 24.” Learners check that 3 × 7 is 21, then correct the result.

Reading passage and questioning

Passage: “Lebo took a small watering can to the school garden. The soil near the beans felt dry. Lebo watered the soil slowly, then placed a label beside each row. Before leaving, Lebo closed the gate to keep the goats out.”

Literal question: What felt dry? Expected: the soil near the beans.

Reason question: Why did Lebo close the gate? Expected: to keep the goats out.

True or false: Lebo left the gate open. Expected: false; the passage says Lebo closed it.

Learning prompt: “Using only the passage, ask me one question at a time. Wait for my answer before giving feedback. Do not add new story facts.” Teacher operates the tool if demonstrated.

Check understanding

24 ÷ 3 = 8; 3 × 7 = 21; 18 ÷ 3 = 6. Learners should explain equal groups or the related multiplication fact. Reading answers must come from the supplied passage. A short verbal explanation is sufficient.

Support and challenge

Use actual counters and read the passage aloud. If division is not yet secure, let learners physically share objects. Advanced learners write a new equal-groups question and verify it.

Optional 15 minute extension

15 minutes: learners create two practice questions from the passage and swap them. Partners identify the sentence that supports each answer.

Optional family practice

Optional: explain one hint strategy to a family member and solve 12 ÷ 3 on paper. No AI use is required.

Lesson 6 Finish and present

Learning objectives

- Finish a story that meets the brief.
- Explain a revision and acknowledge assistance truthfully.
- Demonstrate the core Level 1 skills independently.

Materials and preparation: Workbook Lesson 6; saved Lesson 4 plans and drafts; drawings; teacher assessment rubric. Allow a pair presentation where needed.

Minutes	Stage	Teacher actions
0–5	Recall the brief	Read the story requirements and assessment criteria. Learners locate their first draft.
5–23	Finish the story	Complete a 6 to 8 sentence story and illustration. Add the assistance note. Teacher supports writing without taking over choices.
23–30	Partner review	Pairs check the brief, give one specific suggestion and let the author decide whether to change anything.
30–45	Present	For a pilot group of up to 10, allow about one minute per learner plus short feedback. Larger groups use paired stations while teacher listens in.
45–55	Independent skills check	Learners answer the five questions on workbook 6B without AI or peer help. Read questions aloud when needed.
55–60	Reflect and close	Give one strength and one next step to each learner. Explain completion and any follow-up practice.

Key teaching words

“Today you will show what you made and how you thought about it. Explain what came from the practice draft or teacher demonstration and what you changed yourself. You do not need a perfect drawing or perfect spelling to show good AI judgement.”

Lesson 6 Demonstrations and teaching notes

Optional live demonstration

No live generation is needed in this lesson. If a learner asks for extra AI suggestions, keep it teacher-operated and have the learner record the assistance. Avoid replacing the learner's finished work just before assessment.

Prepared offline version

Use the same workbook, saved draft and drawings. The full final project and skills check work offline. Learners acknowledge the prepared draft rather than claiming live AI use.

Presentation and feedback prompts

Presentation frame: "My story is about … The problem is … I changed … because … I checked … My own contribution was …"

Peer review: Ask whether the story has a character, setting, problem and kind solution; whether the illustration matches; and whether the assistance note is truthful.

Specific feedback: Say "Your solution fits the problem because …" or "The reader may need to know …". Avoid "good" or "bad" without an explanation.

After the check: Mark skills individually. Revisit missed concepts using an oral explanation and a new example. Do not mark a learner as ready based only on a polished story.

Check understanding

Use the rubric and answer key later in this guide. Record participation, project evidence and individual understanding separately. A completion certificate recognises the course; Level 2 readiness requires demonstrated skills.

Support and challenge

Allow a recorded oral story, a teacher scribe or a partner to read the learner's own words. Ask the learner personally about one revision and one privacy rule.

Optional 15 minute extension

15 minutes: gallery walk. Learners leave one specific positive observation and one question on a separate sheet.

Optional family practice

Optional: show the finished portfolio to a parent and explain one way AI can be wrong.

Answer guidance for Lessons 1 to 3

Lesson 1

Starting questions are diagnostic, not scored. Accept sensible examples of what learners have seen; correct misconceptions during teaching. Sorting: calculator and timer = ordinary programmed behaviour in these examples; trained picture classifier and story generator = AI examples.

Privacy choices: A removes a real full name, address and phone number; retain only the story task. B uses a fictional character and no real identifiers, so it is suitable for this activity. C removes a password completely; never enter it into a prompt. D avoids uploading another child's photo and an embarrassing story; rewrite with a fictional person and neutral content. A nickname or invented character name is enough for a story.

Exit examples: AI can suggest text; AI may make mistakes; keep passwords private. A learner need not use those exact words.

Lesson 2

Model prompt labels: Task = write a story opening; Details = fictional robot rabbit, animal shelter, Grade 4 reader, friendly tone, no real names; Format = three short sentences. The clear prepared reply fits those requirements better than the vague reply. Both replies still require review.

Prompt answers vary. Check that there is a clear task, one or more useful details and a specified output format. Accept oral prompts. For the format example, one paragraph does not meet a request for three bullet points even if the topic is correct.

Lesson 3

Claim	Decision	Evidence or correction
1	Contradicted	A: the Moon reflects sunlight.
2	Supported	B: the Moon orbits Earth.
3	Contradicted	C: Earth has one natural moon.
4	Contradicted	D: there is no breathable atmosphere for people.
5	Not enough information	No dragon evidence is supplied. Do not present it as a fact.

Corrected example: "The Moon reflects sunlight. It orbits Earth. Earth has one natural moon. People need life-support equipment on the Moon." Exit question about Moon rocks: the sheet does not describe what rocks feel like, so more suitable evidence is needed.

Answer guidance for Lessons 4 to 6

Lesson 4

The prepared draft breaks the kind tone when Pip shouts at the kitten. The magic wand breaks “no magic”, and flying into space interrupts the shelter setting and does not solve the missing-blanket problem coherently. Accept any safe, kind revision that resolves the problem and follows the brief.

A complete project has 6 to 8 sentences, a fictional character, setting, problem and kind solution, one matching drawing, at least two sentence changes and a truthful assistance note. A scribe may support writing without choosing the content.

Lesson 5

24 shared equally among 3 groups gives 8 in each group. The wrong sample fails because 3 × 7 = 21, not 24. Independent check: 18 ÷ 3 = 6. Workbook reading: the soil near the beans felt dry; the gate was closed to keep goats out; “Lebo left the gate open” is false. No passage evidence says the watering can was red.

Lesson 6 independent skills check

- 1. AI can make mistakes; false claims should be checked. “Always right” is incorrect.
- 2. Keep the password private. Asking for a fictional rabbit story is suitable.
- 3. Example: “Write four short sentences for a Grade 4 reader about a fictional robot finding a lost kite. Give it a kind ending.”
- 4. The claim that Earth has two natural moons is contradicted by the supplied fact that Earth has one.
- 5. Asking for a hint supports learning better than copying a complete answer. Accept a clear explanation that the learner still needs to do the work.

Record learning and respond

Score each check question 0 or 1. For question 3, award 1 only when task, relevant details and format are present; record partial learning in notes. Suggested readiness: at least 4 of 5, with the privacy question correct, plus secure project skills in the rubric. This is a StudyVance teaching recommendation, not a standardised assessment.

If a learner misses an item, reteach it briefly, then assess a fresh example orally or on paper. Do not simply repeat the same answer for memorisation. A learner may complete Level 1 and still need more practice before Level 2.

Project rubric and teacher record

Use 0 = not yet demonstrated, 1 = demonstrated with support, 2 = demonstrated independently. Record the learner's reasoning, including oral explanations. Do not score drawing skill or spelling.

Skill	0 Not yet	1 With support	2 Independent
Clear instructions	Task remains unclear.	Completes task, details and format with help.	Writes or dictates all three clearly.
Checking	Accepts a claim without checking.	Uses supplied evidence when prompted.	Finds evidence and explains the decision.
Story and revision	Brief or revision evidence missing.	Meets brief and makes changes with guidance.	Meets brief and explains purposeful changes.
Privacy	Shares sensitive details or cannot identify risk.	Identifies risk after a reminder.	Removes sensitive details and explains why.
Own contribution	Cannot explain assistance or personal input.	Explains contribution with questions.	Truthfully identifies assistance and own choices.

Suggested readiness: 8 of 10 or higher, privacy = 2, and the individual check described on the previous page. Use judgement where a learner has writing or language support needs; independent thinking can be demonstrated orally.

Completion wording

"Completed StudyVance AI Academy Level 1 AI Explorers, covering clear instructions, checking information, privacy and guided creative work." Use a completion certificate, without claiming accreditation or professional AI competence.

Parent information and course checklist

Information to share before the course

StudyVance AI Academy Level 1 AI Explorers introduces Grade 4 to 6 learners to AI through six guided lessons. Learners practise asking clear questions, checking information, protecting privacy and creating an illustrated story. Lessons use adult-led demonstrations and paper activities. Children do not need their own AI accounts or subscriptions.

AI can produce inaccurate or unsuitable material. The teacher reviews demonstration content before showing it. Learners are taught to check information and keep personal details out of prompts. Optional family tasks can be completed without internet access.

The portfolio shows the learner's planning, revisions and personal contribution. Completion recognises participation and demonstrated learning; it is not an accredited qualification. Dates, fees and class arrangements will be communicated separately.

Contact: Nico du Plessis | 082 377 7490

Teacher checklist before each lesson

- Workbook pages and materials ready.
- Prepared demonstrations read and live output reviewed before display.
- No real learner names, passwords, photos or identifying details in prompts.
- Oral support and extra challenge planned.
- Exit ticket collected and any misconceptions recorded.
- Story plans and drafts stored for the final portfolio.

Reference and version note

Course edition: October 2026. Prepared examples are teaching texts. Before using a live tool, check its current age and usage requirements. For ChatGPT, refer to OpenAI Help Center, "Is ChatGPT safe for all ages?": https://help.openai.com/en/articles/8313401-is-chatgpt-safe-for-all-ages. Age guidance was checked for the academy proposal on 13 October 2026.
